

The *Smart Telecare* allows to keep at home elderly or dependent persons.

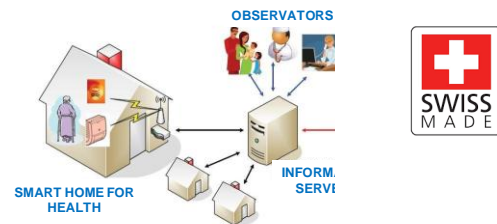

The fight against the isolation of the elderly is our mission. We want to give access to a technology services platform for empowering and humanize the aging. More generally, our effort is part of the great world movement to harmonize the evolution of a population that extends its life expectancy.

The *Smart Telecare* maintains home of elderly or dependent. This technology ensures a watch in a familiar setting and thus delayed traumatic uprooting that is often the result of an accident. This watch allows monitoring of vital by caregivers parameters or the healthcare professionals and can highlight a slow and gradual degradation. Our ambition is to anticipate accidents and create a secure environment.

In addition, the flexibility of our innovative technology is ensured by a constant evolution of plug-ins - *SmartPresence™*, we can adapt to the analysis of specific pathologies. The originality is in the design of intelligent

modules able to collect data and process them to highlight key features and vital to ensure the safety of the user. Differences of behaviour subject to a warning or alarm message.

The basic data are collected through a network of sensors and information are collected by our platform - *Medical Virtual Personal Area Network (MVPAN™)*, and then treated to be made available to the prescribers of care home and assisted services.

The start-up *PersonalCare Systems™* in addition to his economic vision takes position to create a high-value social and human approach. We believe that the benefit can generate an improvement in our company provided is at its source deep inspiration.
